**Scotch-Weld™**  
Structural Adhesive

## Product Selection Guide

Matching 3M Structural Adhesives to your design,  
performance and process requirements

EMEA September 2022

# We Help You Make It. Better.

In today's world, successful new products demand advancements in design, manufacturing processes and end-use performance. Industrial engineering and design professionals around the world depend on 3M™ Scotch-Weld™ Structural Adhesives to help them design beyond the limits of mechanical fasteners to create next generation products.

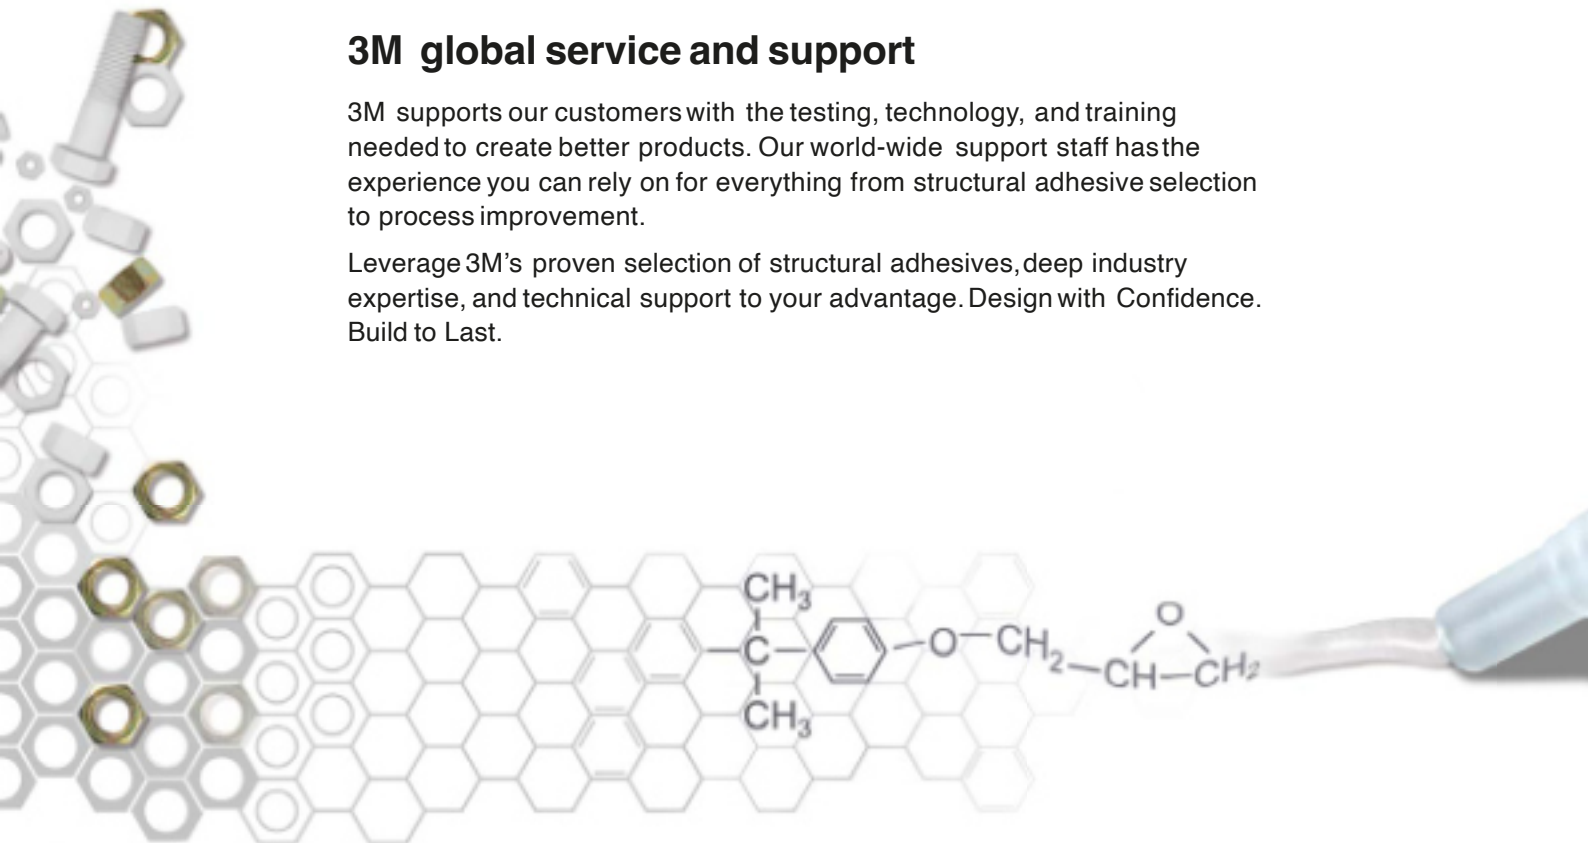

## Trusted innovations from aerospace to office space

With over 60 years of experience developing innovative structural adhesives for aerospace, automotive and hundreds of other industries, 3M delivers the solutions you can trust. Our advanced formulations create durable bonds, even on challenging materials or in extreme conditions.

## 3M global service and support

3M supports our customers with the testing, technology, and training needed to create better products. Our world-wide support staff has the experience you can rely on for everything from structural adhesive selection to process improvement.

Leverage 3M's proven selection of structural adhesives, deep industry expertise, and technical support to your advantage. Design with Confidence. Build to Last.

## Advancing design, process and performance

The benefits of designing and building products with 3M™ Scotch-Weld™ Structural Adhesives help drive product success. Eliminating mechanical fasteners provides a wide range of benefits for all stages of product development.

### Design Solutions

**Improve Aesthetics:** Improve product appearance with invisible joints and smoother bond lines, reduce weight and noise, enhance corrosion and fatigue resistance, and more.

**Freedom of Design:** Join composites to metal, build with hard-to-bond plastics, and use thinner, lighter weight materials.

### Process Efficiencies

**Enhance Productivity:** Reduce labor and material costs, build faster with minimal surface prep and match cure rates to your process needs.

**Accurate and Easy:** Dispense by hand or with automated equipment, and choose from a wide range of viscosities and flow rates.

### Performance Optimization

**Strong, Flexible Bonds:** Adhesives bond and seal simultaneously, eliminate stress concentration and absorb shock and vibration for durable bonds.

**Increased Durability:** Resist chemicals, environment, galvanic corrosion, fatigue, and material separation along edges or corners.

# Simplifying Adhesive Decisions for Your Application

The following questions will help you narrow adhesive choices to a few possibilities for evaluation.

## Q: What materials will be bonded?

A: Structural adhesives work by adhering to the top surface of the bonded parts, so it's important to know the exact material and condition on those surfaces. For metals, will the adhesive be applied to bare metal, or will there be a paint or coating on the surface? For plastics, exactly which base resin? Could there be residual release agents on the surfaces used for mold release?

## Q: What is the preferred cure speed?

A: The chosen structural adhesive must have enough work life (open time, pot life) to allow proper mixing and application of the adhesive and assembling of the bonded parts. Smaller assemblies or shorter cycle time production processes may be able to use a faster curing adhesive with a work life of only five minutes or less, while larger assemblies that require alignment and clamping will probably need a work life of 20 minutes or more.

## Q: What surface preparation will be required?

A: Structural adhesives generally prefer clean, rough, dry surfaces for highest bond strength. This typically means either light abrasion and solvent cleaning of the surface, or solvent cleaning followed by chemical etching or applying a primer. Adhesion tests should be performed to determine the adequate surface preparation for a specific application.

## Q: What types of joints are best for structural adhesives?

A: Joint designs that put the adhesive bond under shear, tension, or compression forces will provide the highest strength. Designs that tend to apply peel or cleavage forces to the adhesive, where the applied stresses are not distributed over the entire bond area, will have lower bond strength, but the bond may still be sufficient for the needs of the application. In addition, optimum bond line thickness typically ranges from  $125\mu$  to  $500\mu$ . The adhesive qualification process should always include testing of prototype assemblies to ensure the adhesive will provide enough performance.

## Q: How are structural adhesives used and applied?

A: Structural adhesives come in many forms, including low viscosity liquids and non-sag pastes, one- and two-component formulations, short and long work lives, and various package sizes and shapes. Most two-part structural adhesives are available in both bulk containers and convenient, easy-to-use cartridge mixing systems.

## Q: What are the general characteristics of the different types of structural adhesives?

A: All structural adhesives provide at least 7 MPa of overlap shear strength to aluminum, but the different adhesive chemistries have various properties:

- **Epoxy adhesives** come in both two-part adhesives (that cure upon mixing the two components) and one-part adhesives (that cure with temperature). They generally have the highest strength and overall performance. They also provide the best resistance to high temperatures, solvents and outdoor weathering. They adhere well to metals, woods and concrete, and the flexible epoxy adhesives also bond to some plastics and rubbers. Epoxy adhesives usually require clean, abraded surfaces to obtain maximum bond strength.
- **Acrylic adhesives** are two-part adhesives that provide excellent bond strength and durability, although slightly lower than epoxy adhesives. However, they have several features that make them easier to use in many applications and manufacturing processes. These benefits include a much faster cure speed, higher tolerance for oily or unprepared bonding surfaces and the ability to bond a wide variety of materials, including nearly all plastics. Newer acrylic adhesive formulations are room temperature stable with a long shelf life, and some have much lower odor than regular acrylic adhesives.
- **Urethane adhesives** are two-part adhesives that are relatively flexible when cured, and therefore tend to have excellent impact resistance and good adhesion to most plastics. They also bond well to woods, concrete and rubbers, but they tend to have reduced resistance to solvents and high temperatures. Uncured adhesive components are sensitive to moisture.
- **Cyanoacrylate adhesives** (instant adhesives) are one-component, lower viscosity liquids that cure extremely quickly with just contact pressure and surface moisture. They adhere well, with thin bond lines, to plastics, metals and rubbers. With the use of primers, they can also adhere to low surface energy plastics and elastomers. They tend to have low flexibility, peel strength and impact resistance compared to other structural adhesives. They are generally used for applications such as gasket bonding and smaller assemblies.
- **Anaerobic adhesives** are one-part adhesives that cure on active metal surfaces when oxygen gets excluded from the bond line. These products keep your factory running efficiently, reducing maintenance and leakage. They do not bond well to glass, plastics or rubbers, and are primarily used for applications such as locking threads and sealing pipe connections.
- **PUR adhesives** (Polyurethane-reactive adhesives) are one-part adhesives that apply like a hot melt, but cure with ambient moisture for near structural strength bonds. Fast set times and build strength over the next 24-48 hours can reach as much as 7 MPa in overlap shear strength. They are flexible and resistant to temperature extremes and most solvents. Most commonly used in bonds where at least one substrate contains or transmits moisture (such as wood or plastic).

### Tensile

**Tensile** is pull exerted equally over the entire joint. Pull direction is straight and away from the adhesive bond.

### Shear

**Shear** is pull directed across the adhesive, forcing the substrates to slide over each other.

### Cleavage

**Cleavage** is pull concentrated at one edge of the joint, exerting a prying force on the bond. The other edge of the joint is theoretically under zero stress.

### Peel

**Peel** is concentrated along a thin line at the edge of the bond where one substrate is flexible.

# Key Markets & Applications

## For 3M™ Scotch-Weld™ Structural Adhesives

### Sporting Goods

#### Key Features & Benefits:

- Excellent impact resistance of high stressed bonds
- High strength for small joints
- High strength bonding of rubber, composites and metals to each other

#### Key Products:

DP420NS, DP8710NS, DP620NS, PR100, TS230

### Specialty Vehicle

#### Key Features & Benefits:

- Weight reduction
- High strength
- Vibration & fatigue resistance

#### Key Products:

DP6330NS, DP8410NS, DP8610NS, 7240, TL42

### Signage

#### Key Features & Benefits:

- One adhesive to bond all of your substrates
- Strong formulations and thin bond lines
- Weather resistance
- UL recognition

#### Key Products:

DP8705NS, DP8405NS, DP100 Plus

### Metalworking

#### Key Features & Benefits:

- High strength and durability
- Reduced surface preparation before bonding, and no grinding after bonding
- Save weight and improve appearance with adhesives instead of welds or rivets

#### Key Products:

DP420NS, DP8407NS, DP8410NS

## Electronics

### **Key Features & Benefits:**

- Low halogen formulations available to meet customer needs
- Fast cure to speed production
- Protect sensitive electrical connections from the environment

### **Key Products:**

DP270, DP8705NS, DP8910NS, TS230, PR100

## Appliance

### **Key Features & Benefits:**

- Simplify operations by bonding after powdercoating
- Eliminate the challenge of bonding rigid to flexible substrates
- Noise damping
- Reduce complexity-bond and seal glass to metal in one step

### **Key Products:**

DP125 Gray, DP6310NS, DP8710NS, TS230, TL42

## Aerospace

### **Key Features & Benefits:**

- Available in UL94 or FST compliant options
- Strong, yet flexible bond lines

### **Key Products:**

2216, DP100FR, TL71

## Plastic, Composite & Rubber

### **Key Features & Benefits:**

- Bonding of low surface energy plastics
- Impact resistant composite bonding

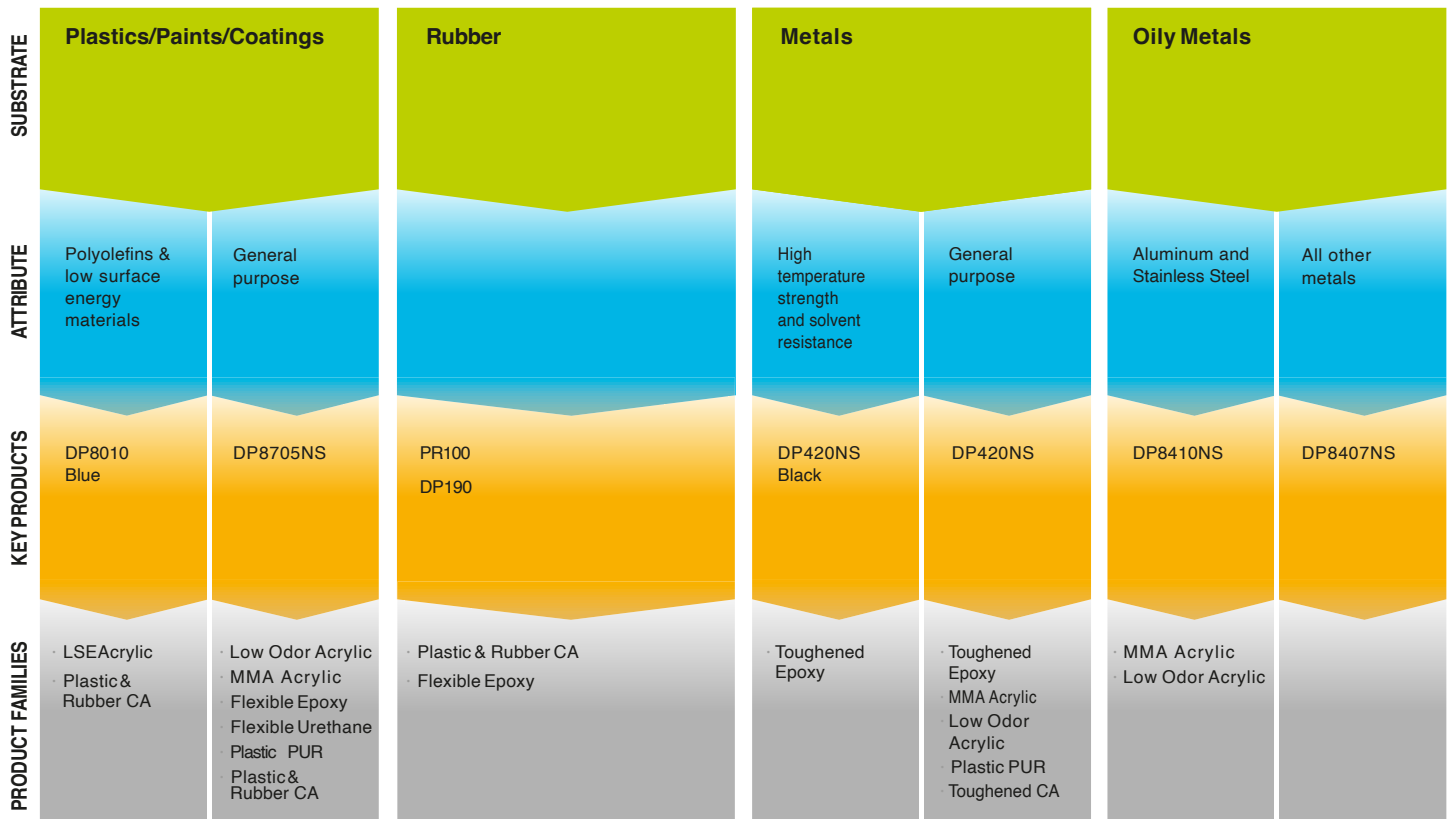

### **Key Products:**

DP8010 Blue, DP190, DP6310NS, 2216, TS230, PR100, DP490

# 3M™ Scotch-Weld™ Adhesives Selector Guide

**Step 1: Select Most Difficult Substrate**   **Step 2: Determine Key Attribute**   **Step 3: Select Product Family**

\*See chart in back of guide for more details.

**SUBSTRATE**   **ATTRIBUTE**   **KEY PRODUCT**   **PRODUCT FAMILIES**

## Structural Adhesive Families

**Rigid Epoxy Adhesives**— Higher tensile strength at lower elongations for greater long-term holding power. Mostly used for rigid substrates (metals) with high static loads.

**Flexible Epoxy Adhesives**— Lower tensile strength at higher elongations for greater capability to withstand differential movement of bonded parts; higher peel strength and higher adhesion to most plastics.

**Toughened Epoxy Adhesives**— Higher tensile strength at lower elongations for fatigue resistance; best suited for dynamic stresses. They have long-term holding power, higher peel strength, and exceptional higher resistance against shock, vibration and impact loads. Lower adhesion to most thermoplastics.

**Heat-cured Epoxy Adhesives**— One-component, rigid adhesives with outstanding strength at elevated temperatures. These adhesives require a thermal cure, typically around 120-180°C for 40-60 minutes.

**MMA Acrylic Adhesives**— Provides greater adhesion to a wide variety of materials including most plastics and paint systems, are tolerant of many surface contaminations. High impact resistance for metal bonds.

**Low Odor Acrylic Adhesives**— Less odor than typical acrylic adhesives and faster rate of strength build than most two-part structural adhesives. Excellent adhesion to a variety of materials, including plastics and paint systems. They provide high impact resistance for plastic bonds; and are tolerant of many surface contaminations.

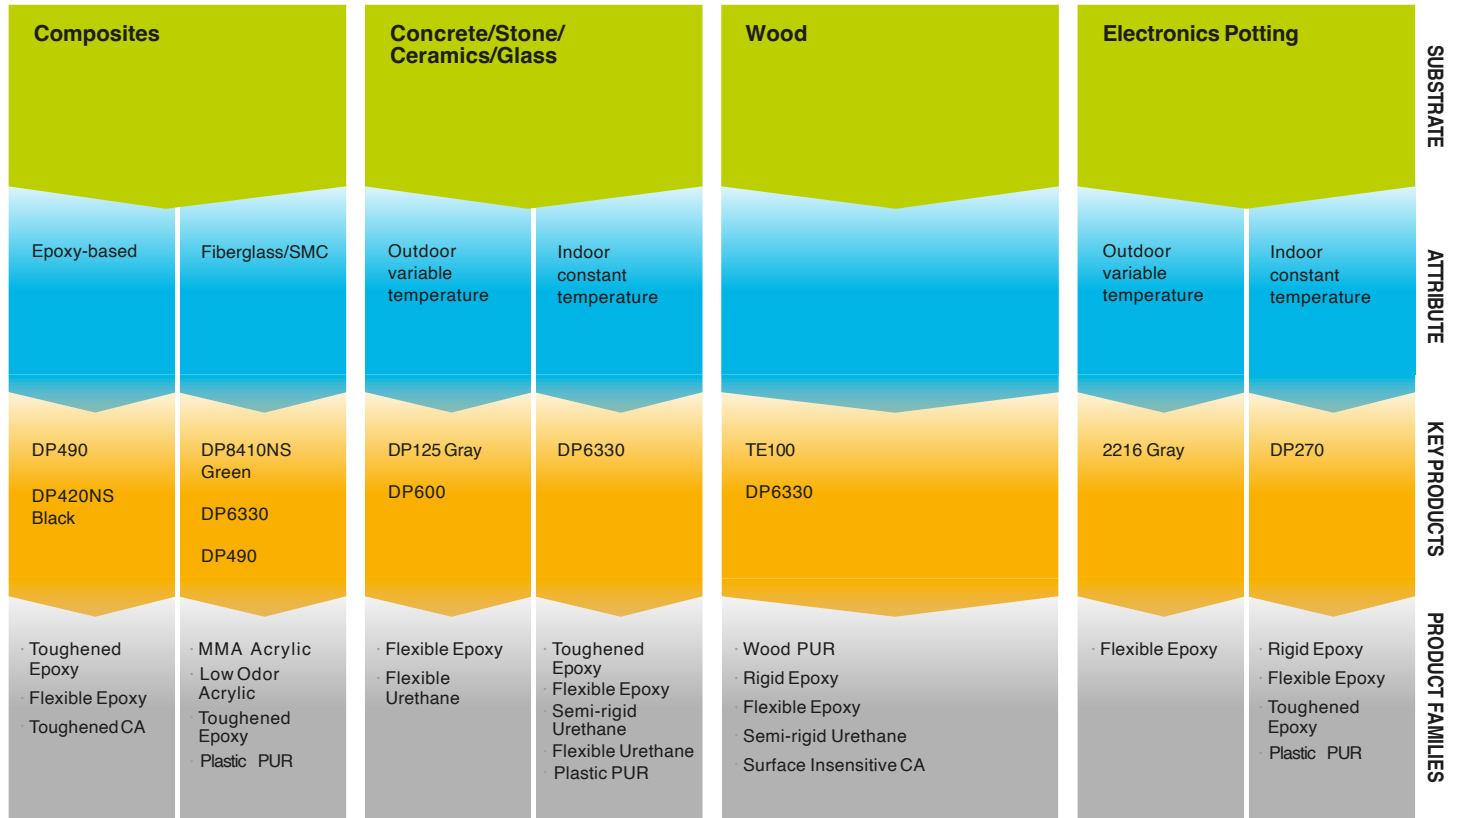

**LSE Acrylic Adhesives**— Outstanding adhesion to polyolefin materials such as polypropylene, polyethylene and TPO without surface treatment.

**Semi-rigid Urethane Adhesives**— Higher tensile modulus and lower elongation capability, with greater long-term holding power.

**Flexible Urethane Adhesives**— Lower tensile modulus and higher elongation capability. Excellent adhesion to most plastics.

**Step 1: Select Most Difficult Substrate**   **Step 2: Determine Key Attribute**   **Step 3: Select Product Family**

\*See chart in back of guide for more details.

■ SUBSTRATE ■ ATTRIBUTE ■ KEY PRODUCT ■ PRODUCT FAMILIES

### PUR Adhesive Families

**Wood PUR**– Higher shear strength at lower elongations for long term holding power. Mostly used for rigid wood substrates and some plastics.

**Plastic PUR**– Higher impact strength, elongation and flexibility for greater capacity to withstand movement of bonded parts. Higher adhesion to most plastics, glass and aluminum.

### Anaerobic Adhesive Families

**Threadlockers (TL)** hold screws and other threaded fasteners in place to prevent loosening from shock, vibration, and thermal expansion and contraction; these adhesives replace lock washers and nylon-insert nuts.

**Pipe Sealants (PS)** provide a pressure seal on threaded tubes and pipes; these adhesives replace various tapes and pastes.

### Instant Adhesive Families

**Plastic & Rubber (PR) Instant Adhesives** bond to the widest variety of materials, have an extremely fast cure speed, and come in a wide range of viscosity.

**Surface Insensitive (SI) Instant Adhesives** cure even on acidic surfaces (such as wood, paper, leather, and ceramic); these adhesives have a slower cure speed than traditional instant adhesives.

**Super Fast (SF) Instant Adhesives** provide the fastest rate of cure speed for most applications.

# Substrate Selector

**Step 1: Select Substrate** **Step 2: Determine Key Attribute** **Step 3: Select Product** (see definitions below)

### 3M™ Scotch-Weld™ Low Odor and MMA Acrylic Adhesives

3M's Low Odor and MMA Acrylic Adhesives are designed for all of your sign application needs. They provide excellent impact strength, high peel strength and greatly extended shelf life compared to ordinary structural adhesives. With high structural strength, fast cure and environmental resistance, they are the first choice for the sign industry. **DP8705NS, DP8710NS, DP8725NS, DP8405NS, DP8407NS, DP8410NS, DP8425NS, DP8610NS and DP8625NS**

### 3M™ Scotch-Weld™ Epoxy Adhesive DP420NS

3M™ Scotch-Weld™ Epoxy Adhesive DP420NS is a black, toughened, non-sag, two-part epoxy structural adhesive that provides good strength along with high impact and fatigue resistance. It can replace mechanical fasteners, screws, rivets and spot welds in many applications.

### 3M™ Scotch-Weld™ Epoxy Adhesive DP100 Clear

3M™ Scotch-Weld Epoxy Adhesive DP100 Clear is a very flexible, fast-setting, two-part epoxy adhesive that cures clear and colorless. It provides a strong, permanent bond, even under vibration and impact and is flexible when cured, making it a good choice for bonding dissimilar surfaces.

### 3M™ Scotch-Weld™ Low Surface Energy (LSE) Plastic Bonding Adhesives

3M's Low Surface Energy Structural Acrylic Adhesives bond to low surface energy plastics such as Polypropylene (PP), Polyethylene (HDPE) and most Thermoplastic Polyolefins (TPOs), providing structural adhesive bond strength that causes the plastic material to fail before the adhesive bond.  
**DP8010 Blue**

### 3M™ Scotch-Weld™ Epoxy Adhesive DP125

3M™ Scotch-Weld Epoxy Adhesive DP125 is a low odor, two-part epoxy that creates strong structural and flexible bonds on metal, ceramics, wood and many plastics. It provides the reliability and strength you need to maintain productive, cost effective results.

### 3M™ Scotch-Weld™ Low Odor and MMA Acrylic Adhesives

3M's Low Odor and MMA Acrylic Adhesives are designed for all of your sign application needs. They provide excellent impact strength, high peel strength and greatly extended shelf life compared to ordinary structural adhesives. With high structural strength, fast cure and environmental resistance, they are the first choice for the sign industry. **DP8407NS, DP8610NS, DP8710NS and DP8805NS**

## 3M™ Scotch-Weld™ Instant Adhesive Primers & Activators

Product (Color)	Key Features	Typical Viscosity (cP)	Time to Handling	Full Cure (Hours)	Size	Stock #	
AC77	Instant adhesive primer for bonding of difficult-to-bond plastics such as polyethylene, polypropylene and polyacetal	<3	1-5 sec.	24	20 ml bottle 1 Liter bottle	7100027600 7100027284	* *
AC11	Suitable for use with slower curing, high viscosity grades, and with porous substrates where the adhesive must cure before being absorbed into the substrate.	1	10-30 sec.	24	200 ml aerosol	7100027507	*

## 3M™ Scotch-Weld™ Anaerobic Adhesives– Threadlockers

Product (Color)	Key Features	Typical Viscosity (cP)	Temperature Range	Time to Handling	Full Cure (Hours)	Size	Stock #	
TL42 (Blue)	Nutlock - medium strength, general purpose	1,200	-54° to 149°C	<30 minutes	24	10mL bottle 50mL bottle 250mL bottle	7100034098 7100033986 7100034072	* * *
TL43 (Blue)	Oil tolerant, medium strength, general purpose	3,300	-54° to 149°C	<30 minutes	24	50mL bottle 250mL bottle	7100034008 7100034865	* *
TL71 (Red)	Permanent studlock for bolts and studs up to 25mm	500	-54° to 204°C	<30 minutes	24	50mL bottle	7100040843	*

### 3M™ Scotch-Weld™ Threadlockers

3M's Threadlocker Adhesives offer a range of products including temporary, permanent and high temperature resistance. These adhesives conform to most industry recognized standards for torque and strength. **TL71, TL42 and TL43**

### 3M™ Scotch-Weld™ Plastic and Rubber Instant Adhesives

The PR (Plastic & Rubber) series of products bonds to most plastics and rubbers with a range of viscosities that will fit all your application needs. Just a single drop per square centimeter bonds several thousand kilogram of holding power. They provide proven, world record strength with a hold of 8 metric tons. **PR20, PR100 and PR1500**

## Applicators

Product	Stock #	Product Features	
Manual Applicator for 45 ml/48,5 ml/50 ml cartridges	7100205939	<ul style="list-style-type: none"> <li>• Lightweight and mobile handset</li> <li>• Suitable for smaller volumes</li> </ul>	
Manual Applicator for 200 ml cartridges (for 2:1 and 1:1)	7000041367	<ul style="list-style-type: none"> <li>• Suitable for medium volumes</li> </ul>	
Manual Applicator for 400 ml cartridges (for 2:1 and 1:1)	7100244651	<ul style="list-style-type: none"> <li>• Suitable for big volumes</li> </ul>	
Manual Applicator for 490 ml cartridges (for 10:1)	7100244652	<ul style="list-style-type: none"> <li>• Suitable for big volumes</li> </ul>	
Pneumatic Applicator for 50 ml cartridges (for 2:1 and 1:1)	7000070273	<ul style="list-style-type: none"> <li>• Allows precise and fatigue-free work</li> </ul>	
Pneumatic Applicator for 400 ml cartridges (for 2:1 and 1:1)	7100230151	<ul style="list-style-type: none"> <li>• Allows precise and fatigue-free work</li> </ul>	
Pneumatic Applicator for 490 ml cartridges (for 10:1)	7100244653	<ul style="list-style-type: none"> <li>• Allows precise and fatigue-free work</li> </ul>	

## Plungers

Product	Stock #	
Plunger for 1:1 and 2:1	7000006768	
Plunger for 10:1	7000062909	

## Nozzles

Product	Stock #	approx. length in mm	
Quadro mixing nozzle for 45 ml cartridges, 10:1	7100202930	90	
Quadro mixing nozzle for 48,5 ml or 50 ml cartridges, 2:1 and 1:1	7100262488	85	
Helical mixing nozzle for 48,5 ml or 50 ml cartridges, 2:1 and 1:1	7100148766	157	
Helical mixing nozzle for 490 ml cartridges	7100015959	240	
Mixing nozzle for 200 ml or 400 ml cartridges	7000043674	275	
Mixing nozzle for 400 ml cartridges (for DP6310/6330)	7100247630	127	

# Global Adhesive Solutions Lab **Neuss**

As a globally active enterprise, we are among the pioneers and providers of inspiration in many areas. Particularly in the field of adhesives, we are leading the way for the economy. So it makes sense for us to cooperate with partners who have a very high level of technical expertise. We show visitors of our Global Adhesive Solutions Lab high-tech equipment of the world's leading companies used in combination with 3M adhesive technology.

This is where we process a wide range of 3M products - primarily 1K and 2K adhesives, hot melts as well as spray adhesives and adhesive tapes.

Our demonstrations ensure that you can experience various automated application methods, the process control and a comprehensive range of 3M services. This also includes the force-controlled application of our VHB tape using a specially developed application head.

We will show you automated bonding processes and the use of the correct materials for the relevant area of application. You will have the opportunity to actively exchange ideas with the experts, contribute your own ideas and develop solutions in cooperation with 3M.

# 3M technology transfer to ensure efficient working, today, tomorrow and in the future.

## Our service to you

**Training**  
Individual training and practical experience

**Solutions**  
Identify new innovative perspectives

**Expertise**  
Access to the entire expertise of a global enterprise

**Instructions**  
Individual product and process instructions

**Support**  
Support from 3M application technology

**Demonstration**  
Automated applications using high-tech equipment

## Your process optimization

**Shorter processing times**

**Increase in productivity**

**Improved cost-effectiveness**

**Lasting sustainability**

**Light-weight**

**eco-friendly materials**

**Increase in quality**

**Technological advance**

# Surface Preparation Tips

The following surface preparation steps are generally recommended for most substrates and structural adhesives. See Technical Data Sheets for more specific recommendations.

## METALS

1. Safely wipe surface with acetone or methyl ethyl ketone (MEK) using a clean cloth. A heavier degreaser may be needed if the substrate contains a layer of processing oil.
2. Lightly abrade surface with sandblasting, fine grit sandpaper or 3M™ Scotch-Brite™ Hand Pad 7447 maroon pads.
3. Wipe surface with acetone or MEK to remove debris.
4. Allow surface to dry before applying adhesive.

## PLASTICS AND RUBBERS

1. Lightly abrade surface with sandblasting, fine grit sandpaper or 3M™ Scotch-Brite™ Hand Pad 7447 maroon pads.
2. Wipe surface with isopropyl (IPA) alcohol using a clean cloth to remove debris.
3. Allow solvent to evaporate before applying adhesive.

## GLASS

1. Wipe surface using a clean cloth with solvent containing 0.5 wt% silane adhesion promoter or wipe with 3M™ Scotch-Weld™ Metal Primer 3901.
2. Allow solvent to evaporate before applying adhesive.
